

Meeting Agenda

OBS. This document was retroactively created after the meeting due to lack of knowledge about the need of meeting protocols.

Group: Yayeet Group Consulting, Group 5

Date: 06-09-2019

Chair: TBD

Participants: Alexander Ohlin,

Objectives

- Team needs to brainstorm multiple ideas for project
- Team needs to decide on which idea to center the project around
- Team needs to decide how to communicate

Discussion items

- Is the scope of the project both complex and doable?
- Should the project be a mobile app or a desktop application?
- What different libraries of packages could be used to assist in the creation of the app?

Outcomes and assignments

Outcomes:

1. Team has decided to build a mobile application where a user can save a "round" of some different board game. The app will also have functionality for seeing statistics and interacting with other users (their statistics, communicate, plan other rounds?).
2. The team has identified the need for a database in order to save information about our users. Therefore, team has initially decided to use Firebase to solve this problem.
3. Due to the project being a mobile application the team has decided to use Android Studios to code in.
4. Team has created a git repository and a slack work-space to share code and communicate between members respectively. Furthermore, the team will attempt to implement an Agile workflow in this project and has thus set up a Trello board for the team.

5. Team has also started to discuss and create sketches for how the app might look and how they (in a very broad sense) imagine it to work.

Assignments:

1. Alexander was "assigned" to create this protocol to document the progress done on the first week.
2. All members of the team will need to accept invitations to the various communication and sharing programs that will be used in the project.
3. Team members need to have Android Studios installed on their respective computers.

End of Meeting

- Next meeting will be held on 09/09/2019
